

## DO MORE WITH YOUR DATA

Most online power supply management is simply a web version of a service report — a static summary with point-and-click access. When DC Group developed D-Tech™ we took the static service report and hit hyperdrive.

D-Tech™ is the only power management system that is used by Account Managers, engineers and the client. This robust, interactive database receives constantly updated information and organizes, analyzes and presents it intelligently. It alerts you to key data that helps you find opportunities for new efficiencies. It lets you trend and forecast for bullseye budgets. It sends immediate updates on service visits. And it does it all so you can do your job a whole lot better. No other technology has ever come close.

Take it all on the go – the full-featured D-Tech™ app has everything you need for mobile site management.

**Service checks:** Check on technician reports, preventative maintenance visits, quotes for service and root cause analysis.

**Reporting:** Many of our customers have hundreds of sites, and wading through reports is extremely time consuming. D-Tech™ lets you filter, summarize and get a smart snapshot in seconds.

**Trending:** From the smallest parts to entire UPS units, you can forecast end-of-life and maintenance as far as ten years into the future.

**Searching:** Use the search function to get an update on the most specific piece of equipment or entire sites.

**Proactive maintenance:** The Account Manager portal lets your dedicated Account Manager keep you on track. The special UPS consumables screen shows commonly-replaced UPS components for easy scheduling.

D-Tech™ is the ultimate database tool for proactive planning and budgeting. Get in touch for a free demo, or visit [dc-group.com/d-tech](http://dc-group.com/d-tech).
