

THE POWER OF PARTS

It's the little things that have put us ahead of the pack — little things like circuit boards, fuses, blower fans and all the components that make your uninterruptible power supply system run flawlessly.

We know the right part means the difference between costly downtime and a quick fix for you. That's why DC Group has more than 1 million parts readily available in our warehouse and North American distribution centers. And while others focus on the most recent components, we have everything from brand new to OEM-discontinued parts from the 1980s.

We support all major brands: Emerson, Powerware, MGE, APC, Mitsubishi, Chloride, General Electric and Toshiba to name a few. In fact, we have the largest and most comprehensive parts inventory of any company in the industry. No matter what year, make or model of equipment, DC Group has you covered.

Our North American parts network lets us get to your site with the correct part in record time. DC Group's 100% job completion rate, 95% customer retention rate and 24/7/365 emergency service have made us the industry leader.

Your OEM-discontinued parts specialists:

DC Group maintains a full line of discontinued and hard-to-find parts to maximize your backup power investment. Where the OEM leaves off, we step in.

Discover one-stop convenience for routine maintenance, emergency downtime or larger disasters that may require UPS rental. We support every make and model of UPS unit made since the 1980s.

Get proactive and save: Regularly replacing components can save you thousands in costly repairs. Routine replacement also ensures maximum efficiency for lower utility bills.

Your DC Group dedicated Account Manager is here to keep it all on track!

Talk to us today to get on schedule with preventative maintenance and to find out how DC Group delivers powerful savings with the right parts.
