# THE VITAL STATS YOU NEED
IN ONE INTUITIVE INTERFACE

Introducing the industry's only secure remote monitoring solution for critical power equipment.

Security for software-driven equipment is more important than ever – and that includes uninterruptible power supply (UPS) units. Site Sentry is the industry's first secure remote monitoring solution. It encrypts and authenticates all data – the same protocol used by banks. Additionally, Site Sentry bypasses your firewall with a proxy agent to protect firewall integrity.

Standing guard 24/7, Site Sentry gives you constant real-time stats on the health of your UPS units in a single intuitive interface. Monitor unlimited units, any time in any location. Get instant alerts by text, email or phone if there's an issue. Site Sentry is compatible with any UPS make/model with an SNMP card.

See it at a glance. Get real-time data on:

Load protected status

Percent load on UPS

Loads balanced

Inverter component failures

Battery failures

Battery capacity

UPS temperature alarm

Input and output voltages

Alarm response status updates and progress comments

Other custom diagnostics results and alarms
